SUMMARY

Android engineer with 5+ years shipping Kotlin and Jetpack Compose to production, currently on a high-traffic international fashion retail app used by millions, where I led the new shopping cart to production and implemented the analytics for the new checkout. AI is how I work every day: Claude Code is my primary tool, and over the past year I have built an **agentic coding harness** (50+ typed skills, deterministic quality gates, LLM-as-judge evals) and **ArIAdna**, a Compose Multiplatform app that turns live coding-agent sessions (steps, sub-agents, refusals, errors) into a usable interface. What I care about most is the part that makes agents trustworthy for users: knowing when to trust the output, and when to question it.

EXPERIENCE

Android Developer — ALTEN Delivery Centre

Mar 2023 – Present · ***Client: international fashion retail app (millions of users)***

- Feature lead for the new shopping cart, fully rewritten across the data, domain and UI layers (a two-tab cart + wishlist screen): took over mid-rewrite and delivered it to production.
- Implemented GA4 and Zenit analytics for the new checkout, and migrated the app's analytics stack from GA3 to GA4, refactoring the legacy tracking layer; recently added cookie-consent tracking (GA4 consent mode).
- Currently on core app health: enabling R8 across the app and building a high-precision dead-code detection workflow.
- Core team member: support feature squads across verticals, driving engineering best practices and the adoption of the app's new architecture.
- Built an analytics observability tool (Python) that captures logcat and Firebase traffic and reconciles the events emitted by 6 analytics SDKs into a visual dashboard, replacing Firebase-console-only visibility — adopted by the QA team.
- Introduced an **AI coding-agent harness** (skills, quality gates, LLM-based evals) into the team's workflow, based on my own tooling.

Technologies: Kotlin · Jetpack Compose · XML · MVI · Clean Architecture · SOLID · GA4 · Firebase · Python · Git · Jira

Software / Android Developer — EASYTECH S.L.

Dec 2020 – Mar 2023

- Built a new Android app from scratch: architecture, networking, local persistence and release.
- Maintained and evolved the company's desktop and mobile applications.

Technologies: Kotlin · XML · Compose · Retrofit · SQLite · Git

Android Development Intern — EASYTECH S.L.

Oct 2020 – Dec 2020

PROJECTS

ArIAdna — A visual layer on top of Claude Code (Kotlin Multiplatform + Compose Multiplatform)

Personal project · in active development · private repo, demo on request

- Turns a live coding-agent session into UI: session tabs, live sub-agents and steps, and per-panel loading and error states with retry. A TypeScript plugin for Claude Code streams session events to the app over a local socket.
- The domain models how every agent turn ends — answer, user abort, model refusal or API error — and every source returns a result instead of throwing, so the screen always knows what to show.
- Built through an agent-driven workflow: an unattended agent implements in pull requests on a home server, and every PR is reviewed and fully built before it is merged; I own the design and the decisions. 340+ commits,

architecture tests and Roborazzi screenshot tests.

mas-skills — Agentic coding harness for Android / KMP

Personal project · currently private, preparing an open-source release (Apache-2.0)

- 50+ skills with I/O contracts, deterministic quality gates, **LLM-as-judge evals** and run telemetry, turning plausible agent output into verifiable output.
- Audited the harness on 8,466 real agent turns and found 3 gates that reported green without evidence — now my default question for any AI feature: what is the evidence?
- Multi-runtime adapters (Claude Code, Codex CLI, GitHub Copilot) and local-model eval benchmarking with LM Studio (Qwen, Gemma).

TECHNICAL SKILLS

Languages: Kotlin · Java
UI: Jetpack Compose · Compose Multiplatform · XML · Material 3
Multiplatform: Kotlin Multiplatform (KMP) · shared module configuration
Architecture: MVVM · MVI · Clean Architecture · SOLID
Networking: Retrofit2 · Ktor
Dependency Injection: Dagger-Hilt · Koin
Async: Coroutines · Flows
Persistence: Room · SQLite
Testing: JUnit · Espresso · MockK · Mockito · Compose Testing · Roborazzi (screenshot tests)
AI tooling: Claude Code (daily, primary tool) · Codex CLI · GitHub Copilot · agentic harnesses · LLM-as-judge evals · MCP · LM Studio
CI/CD & Build: GitHub Actions · Gradle Convention Plugins · dependency management
Tools: Android Studio · IntelliJ IDEA · Git · GitHub · Jira · Figma · Confluence · Firebase Suite · Postman

EDUCATION & CERTIFICATIONS

Higher Technician in Multiplatform Application Development (Técnico Superior en Desarrollo de Aplicaciones Multiplataforma) — IES Lázaro Cárdenas (2018–2020)

KMP & Compose Multiplatform — Appcademy (in progress)

Firebase with Kotlin — Appcademy (in progress)

Kotlin Expert — DevExperto (2024)

Jetpack Compose desde 0 — Udemy (2023)

Android Testing: JUnit, Espresso, Mockito, TDD — Udemy (2023)

LANGUAGES

Spanish — Native · English — C1
